### ARCHITECTURAL DESCRIPTION

**SIGNIFICANCE:** Outstanding Resource within the Takoma Park Historic District

**STYLE:** Colonial Revival

**DATE:** c. 1915-25

![Fig. 1: Subject property.](image-url)
PROPOSAL:

The applicant proposes to install a 8’ x 10’ front gable shed at the rear of the subject property. The shed will be approximately 12’-8” high, as measured from grade, and will have painted engineered wood siding and architectural asphalt shingles to match those on the historic house.

APPLICABLE GUIDELINES:

Policy On Use of Expedited Staff Reports for Simple HAWP Cases

IV. The Expedited Staff Report format may be used on the following type of cases:

14. Construction or replacement of storage and small accessory buildings that are not readily visible from a public right-of-way.

Montgomery County Code; Chapter 24A-8

(b) The commission shall instruct the director to issue a permit, or issue a permit subject to such conditions as are found to be necessary to insure conformity with the purposes and requirements of this chapter, if it finds that:

(1) The proposal will not substantially alter the exterior features of an historic site or historic resource within an historic district; or

(2) The proposal is compatible in character and nature with the historical, archeological, architectural or cultural features of the historic site or the historic district in which an historic resource is located and would not be detrimental thereto or to the achievement of the purposes of this chapter; or

(3) The proposal would enhance or aid in the protection, preservation and public or private utilization of the historic site or historic resource located within an historic district in a manner compatible with the historical, archeological, architectural or cultural value of the historic site or historic district in which an historic resource is located; or

(4) The proposal is necessary in order that unsafe conditions or health hazards be remedied; or

(5) The proposal is necessary in order that the owner of the subject property not be deprived of reasonable use of the property or suffer undue hardship; or

(6) In balancing the interests of the public in preserving the historic site or historic resource located within an historic district, with the interests of the public from the use and benefit of the alternative proposal, the general public welfare is better served by granting the permit.

(c) It is not the intent of this chapter to limit new construction, alteration or repairs to any 1 period or architectural style.

(d) In the case of an application for work on an historic resource located within an historic district, the commission shall be lenient in its judgment of plans for structures of little historical or design significance or for plans involving new construction, unless such plans would seriously impair the historic or architectural value of surrounding historic resources or would impair the character of the historic district. (Ord.No.9-4 §1; Ord.No.11-59)

Secretary of Interior’s Standards for Rehabilitation

The Secretary of the Interior defines rehabilitation as “the act or process of making possible a compatible use for a property through repair, alterations, and additions while preserving those portions or features, which convey its historical, cultural, or architectural values.” The Standards are as follows:
2. The historic character of a property shall be retained and preserved. The removal of historic materials or alteration of features and spaces that characterize a property shall be avoided.

9. New additions, exterior alterations, or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale, and architectural features to protect the historic integrity of the property and its environment.

STAFF RECOMMENDATION:

Staff recommends that the Commission approve the HAWP application under the Criteria for Issuance in Chapter 24A-8(b), (1), (2) & (d) having found that the proposal is consistent with the Takoma Park Historic District Guidelines, and therefore will not substantially alter the exterior features of the historic resource and is compatible in character with the district and the purposes of Chapter 24A;

and with the Secretary of the Interior’s Standards for Rehabilitation #2 and 9;

and with the general condition that the applicant shall present the 3 permit sets of drawings, if applicable, to Historic Preservation Commission (HPC) staff for review and stamping prior to submission for the Montgomery County Department of Permitting Services (DPS) building permits;

and with the general condition that final project design details, not specifically delineated by the Commission, shall be approved by HPC staff or brought back to the Commission as a revised HAWP application at staff”s discretion;

and with the general condition that the applicant shall notify the Historic Preservation Staff if they propose to make any alterations to the approved plans. Once the work is completed the applicant will contact the staff person assigned to this application at 301-563-3400 or michael.kyne@montgomeryplanning.org to schedule a follow-up site visit.
APPLICATION FOR
HISTORIC AREA WORK PERMIT

Contact Name: JULIAQ@GMAIL.COM
Contact Person: Julia Ortiz
Daytime Phone # 202-564-1931

Tax Account No.:

Name of Property Owner: Julia Quinn Ortiz

LOCATION OF Proposed Work:

House Number: 102 Street: Park Avenue
Town/City: Takoma Park Nearest Cross Street: Carroll Avenue
Lot: 3 Block: 1 Subdivision: 0025
Floor: 0 Parcel: 0000

PART ONE: TYPE OF PERMIT ACTION AND USE

1A. CHECK ALL APPLICABLE

☐ Construct ☐ Extend ☐ Alter/Retract ☐ Adder/Addition ☐ Porch ☐ Deck ☐ Shed
☐ Move ☐ Install ☐ Window/Door ☐ Solar ☐ Fireplace ☐ Woodburning Stove ☐ Single Family
☐ Alteration ☐ Repair ☐ Renovate ☐ Fence/Wall (complete Section 2) ☐ Other:

1B. Construction cost estimate $ 600

1C. If this is a revision of a previously approved active permit, see Permit #

PART TWO: COMPLETE ONLY FOR NEW CONSTRUCTION AND EXISTING ADDITIONS

2A. Type of sewage disposal:
  ☐ 01 WSSC "Septic"
  ☐ 02 "Septic"
  ☐ 03 "Other:

2B. Type of water supply:
  ☐ 01 WSSC "Well"
  ☐ 02 "Well"
  ☐ 03 "Other:

PART THREE: COMPLETE ONLY FOR FENCES/RETAINING WALL

3A. Height ______ feet ______ inches

3B. Indicate whether the fence or retaining wall is to be constructed on one of the following locations:
  ☐ On property line/property line
  ☐ Entirely on land of owner
  ☐ On public right of way/assessment

I hereby certify that I have the authority to make the foregoing application, that the application is correct, and that the construction will comply with plans approved by all agencies listed and I hereby acknowledge and accept this to be a condition to the issuance of this permit.

Julia Ortiz
Signature of owner or authorized agent 9/24/19

Application/Permit No. 891295 Date Filed: Date Issued:

SEE REVERSE SIDE FOR INSTRUCTIONS 

ED 6/21/95
THE FOLLOWING ITEMS MUST BE COMPLETED AND THE REQUIRED DOCUMENTS MUST ACCOMPANY THIS APPLICATION.

1. WRITTEN DESCRIPTION OF PROJECT
   a. Description of existing structure(s) and environmental setting, including their historical features and significance:
      We would like to add a shed to the rear of the property on the existing concrete pad where a garage was once located.

   b. General description of project and its impact on the historic resource(s), the environmental setting, and, where applicable, the historic district:
      The shed is a Lowe's "Craftsman Resin Storage Shed" (model CMR55SC7750). It will ideally be an innocuous addition to the property that does not affect the historical home. It is a 7x7 foot shed in a neutral color.
      Its location to the rear of the property, screened on one side by a 15 foot hedge, should render it relatively un-noticeable.

2. SITE PLAN
   Site and environmental setting, drawn to scale. You may use your plot. Your site plan must include:
   a. the scale, north arrow, and date;
   b. dimensions of all existing and proposed structures; and
   c. site features such as walkways, driveways, fences, ponds, streams, trash dumpsters, mechanical equipment, and landscaping.

3. PLANS AND ELEVATIONS
   You must submit 2 copies of plans and elevations in a format no larger than 11" x 17". Plans on 8 1/2" x 11" paper are preferred.
   a. Schematic construction plans, with marked dimensions, indicating location, size and general type of walls, window and door openings, and other fixed features of both the existing resource(s) and the proposed work.
   b. Elevations (facades), with marked dimensions, clearly indicating proposed work in relation to existing construction and, when appropriate, context.
      All materials and fixtures proposed for the exterior must be noted on the elevations drawings. An existing and a proposed elevation drawing of each facade affected by the proposed work is required.

4. MATERIALS SPECIFICATIONS
   General description of materials and manufactured items proposed for incorporation in the week of the project. This information may be included on your design drawings.

5. PHOTOGRAPHS
   a. Clearly labeled photographic prints of each facade of existing resource, including details of the affected portions. All labels should be placed on the front of photographs.
   b. Clearly labeled photographic prints of the resource as viewed from the public right-of-way and of the adjoining properties. All labels should be placed on the front of photographs.

6. TREE SURVEY
   If you are proposing construction adjacent to or within the dripline of any tree 6" or larger in diameter (at approximately 4 feet above the ground), you must file an accurate tree survey identifying the size, location, and species of each tree of at least that dimension.

7. ADDRESSES OF ADJACENT AND CONFRONTING PROPERTY OWNERS
   For ALL projects, provide an accurate list of adjacent and confronting property owners (not tenants), including names, addresses, and zip codes. This list should include the owners of all lots or parcels which adjoin the parcel in question, as well as the owner(s) of lot(s) or parcel(s) which lie directly across the street/highway from the parcel in question.

PLEASE PRINT IN BLUE OR BLACK INK OR TYPE THIS INFORMATION ON THE FOLLOWING PAGE.
PLEASE STAY WITHIN THE GUIDES OF THE TEMPLATE, AS THIS WILL BE PHOTOCOPIED DIRECTLY ONTO MAILING LABELS.
Detail: View from sidewalk to rear of property. Future shed area is to the left of the furthest silver SUV.

1. Most buildings of less than 120 square feet do not require a building permit from the local building department, but be sure to check with your local authorities before starting construction.

2. Contact your local building department to locate existing underground utility lines for you. You don’t want to disturb or hit any lines while preparing your foundation.

3. Refer to the LP website [lpshed.com/advice/buildshedfoundation](http://lpshed.com/advice/buildshedfoundation) for more detailed instruction on how to prep and ready your site for the shed foundation. Important: The shed needs to sit on a stable/level surface, enabling the doors to work properly.

4. The shed floor also needs to sit at least 6" above the surrounding ground, for proper rainwater drainage and to prevent the shed from absorbing any standing rainwater.

Please refer to "lpshed.com" for additional application and installation details to help build your shed.

NOTE: Refer to "LPSHED.com/advice/buildshedfoundation" for all site prep information.

For exclusive use with all LP®SMARTSIDE®, LP®PROSTRUCT®, and LP®SILVERTECH® building materials.
1. Lay out the perimeter of the shed, either with a stringline or with stakes marking the corners.

2. This shed will rest on an assembly of 6x6 and 2x6 wood framing members.

3. Install (6) 8”x8”x16” concrete masonry units (cmu’s) at the corners and mid-span of the 10’ length of 6x6 platform. Be sure the cmu’s are level and straight in line with the overall dimensions of this 8’x10’ shed.

4. Lay the 6x6’s across the 3 cmu’s on each side of the shed. Test and adjust as needed for levelness and squareness. To achieve squareness, measure diagonally from corner to opposite corner of the 6x6’s. You can adjust this as you build the platform.

5. Cut and install the 2x6 floor joists at 16” on center, attach to the 6x6’s with lag bolts and washers or with joist hangers. Adjust the diagonal measurements until they are equal. The platform framing will then be square.

6. Install sheets of LP® ProStruct® floor panels following the LP ProStruct Flooring installation instructions found at [lpcorp.com/resources/product-literature](http://lpcorp.com/resources/product-literature). Be sure to stagger the seams between floor panels so 4 corners of 4 panels do not meet.
1. Lay out the (2) 4x4 corner posts and 2x4 studs (at 16" on center) on the shed floor. Use the shed floor as a guide to constructing your walls, since the floor is level and square.

2. When framing window and door openings, use 2 2x4 studs on each side of the openings.

3. Secure the ends of the posts and studs with 2x4 top and bottom stud plates at each end. Drive screws through these top and bottom plates into the posts and studs to hold them in place. We will be adding a second top plate member after all walls are erected.

4. Install the horizontal cross bracing/blocking between the studs with 2x4’s cut to length.

5. Continuously measure the wall to be sure it is square.

6. After the studs and corner posts are secured to the top and bottom plates, raise the wall into place on the shed floor. Attach 2x4 diagonal bracing to the top of the wall at each end. Use a level to determine that the corner posts are perfectly plumb and vertically square. Once square, screw the diagonal brace to the outside face of the platform to hold the wall in place.

7. Construct the remaining 3 walls in a similar fashion, making sure to frame properly for all appropriate openings in the walls. Allow the shorter 8’ end walls to rest within the corner posts. Temporarily hold these walls in place with diagonal bracing.

8. Before continuing, re-measure all corners and walls, making sure all are level and plumb as needed.

9. Attach 2x4 top plates to the tops of the wall assembly. Overlap the joints where the walls come together with the top plates. Continue installation of these top plates all around the perimeter of the walls.
1. The rafters meet at the top and are secured to the 2x10 ridge beam. You will have to temporarily brace the ridge beam at the height required. Use a piece of 4x4 to support the ridge beam.

2. The 2x6 roof rafters have small notches ("birds-mouth") cut into them which allow them to sit on the top plates of the walls. Cut out these notches on the dimensions shown on the Details in the shed plan. Make another angle cut at the end of the rafter to fit onto the ridge beam. Refer to the Details on the shed plan for these dimensions. Use a power saw to cut the majority of the rafters, and finish the cuts with a handsaw.

3. If the bottom end of the rafter shows a decorative “raftertail,” cut out according to the Details on the shed plan.

4. Make 2 roof rafters. Test-fit them on the walls and ridge beam. Adjust and re-cut as needed for a tight fit. Once a good fit is established, these rafters will act as a template for the remaining rafters. Simply place this rafter template on the remaining 2x6’s, mark and cut as needed. But, it’s always good practice to test-fit as you go.

5. Once all the rafters are cut, mark their locations on the tops of the walls. Refer to the drawings for locations of rafters and outlookers members.

6. Start the assembly by setting pairs of rafters at the ends of the building. Adjust the ridge beam as needed so all are straight, level and plumb. Then, install the remaining rafters, making sure all fits are tight. Attach with screws angled through the rafters into the top plates of the walls.
1. We will be using the LP® ProStruct® Roof Sheathing with SilverTech®. Cut sheets as needed to fit the overall size of the roof. Fasten to each roof rafter and outrigger following the roof sheathing installation instructions found at lpcorp.com/resources/product-literature.

2. Depending on the type of roofing finish you put on the shed, follow that roof manufacturer’s nailing instruction for proper installation. To accommodate longer recommended nail lengths, you may have to add a layer of ½” oriented strand board (OSB) on top of the LP ProStruct Roof Sheathing with SilverTech. Then, install the finished roof and materials as recommended by the manufacturer.
1. Re-measure the window and door rough opening, to assure a good fit with the window frame. Adjust your rough framing as needed to properly accept the window and door frames.

2. Install the windows as per the window manufacturer you selected to use. Be sure to include a length of metal flashing along the top of horizontal window trims. Refer also to the Details on the shed plans. Install window hardware.

3. Install the door frame and door as per its manufacturer. Be sure to include a length of metal flashing along the top of horizontal door trims. Shim the frame as needed to assure that it’s plumb. Install the doors on their hinges. Install the door hardware.

4. Install the LP® SmartSide® panel siding, along with the LP® SmartSide® trim boards following the LP® SmartSide® installation instructions found at lpcorp.com/resources/product-literature. Use 8” o.c. grooved, vertical panels for the lower section of the gable wall ends, and use 4” o.c. grooved, vertical siding panels above the trim boards to the studs. Be sure to include a length of metal flashing along the top of horizontal trim pieces and panel seams.

5. Finish the exterior of the shed with materials of your choice. Be sure to follow the manufacturer’s installation instructions for proper application and maintenance of your finishes.

Product Overview
LP’s 48 in. x 96 in. Textured Redwood Grain Fiber Panel Siding features a redwood grain style with v-groove and shiplap edge for an authentic wood look that is simple to install. This panel comes pre-primed for added convenience. It cuts like regular wood using standard woodworking tools.

- Shiplap edges
- Pre-primed for exceptional paint adhesion
- Significantly lighter than comparable fiber cement panel
- Great for all of your outdoor project needs
- Ideal for homes or outdoor buildings in areas of high winds or seismic activity
- California residents see Prop 65 WARNINGS
