Preliminary Consultation
MONTGOMERY COUNTY HISTORIC PRESERVATION COMMISSION
STAFF REPORT

Address: 8012 Westover Road, Bethesda  
Meeting Date: 6/29/2020

Resource: Contributing Resource  
(Greenwich Forest Historic District)  
Report Date: 6/17/2020

Applicant: John and Kate Wyckoff  
(Sharon Washburn, Architect)  
Public Notice: 6/10/2020

Review: Preliminary Consultation  
Tax Credit: N/A

Case Number: N/A

PROPOSAL: Building additions

STAFF RECOMMENDATION:

Staff recommends that the applicants make any revisions based upon the HPC’s comments and return for a second preliminary consultation or with a HAWP application, depending on the HPC’s recommendation.

ARCHITECTURAL DESCRIPTION:

SIGNIFICANCE: Contributing Resource within the Greenwich Forest Historic District
STYLE: Colonial Revival
DATE: 1941

Fig. 1: Subject property, as indicated by the yellow star.
PROPOSAL:

The applicants propose building additions at the subject property.

APPLICABLE GUIDELINES:

When reviewing alterations and new construction within the Greenwich Forest Historic District several documents are to be utilized as guidelines to assist the Commission in developing their decision. These documents include the historic preservation review guidelines in the approved and adopted amendment for the Greenwich Forest Historic District (Guidelines), Montgomery County Code Chapter 24A (Chapter 24A), and the Secretary of the Interior’s Standards for Rehabilitation (Standards). The pertinent information in these documents is outlined below.

Greenwich Forest Historic District Guidelines

A. PRINCIPLES

The preservation of the following essential elements of Greenwich Forest is the highest priority in making decisions concerning applications for work permits. These Principles are not meant to stop or create unreasonable obstacles to normal maintenance, reasonable modifications, and the evolving needs of residents.

A1. Greenwich Forest was conceived of, built, and to a great degree preserved as a park-like canopied forest with gentle topographic contours, in which the presence of houses and hardscape are understated relative to the natural setting. The removal of mature trees and the significant alteration of topographic contours on private property, the Greenwich Forest Triangle, and the public right-of-way in Greenwich Forest should be avoided whenever possible. The Greenwich Forest Citizens Association (GFCA) will continue to support the replacement of trees. In order to protect mature trees and the natural setting of Greenwich Forest, and to limit runoff into the Chesapeake Bay, the creation of extensive new impermeable hardscape surfaces should be avoided whenever possible.

A2. The houses in Greenwich Forest create an integrated fabric well-suited to its forest setting. These Guidelines are intended to preserve this environment by ensuring that approved work permits include appropriate safeguards that protect the following three essential elements of this fabric.

a. An array of revival American architectural styles that, taken together, make a significant statement on the evolution of suburban building styles (see Appendix 2).
b. The scale and spacing of houses and their placement relative to adjacent houses and the public right-of-way. The original developers made decisions on these three elements to understate the presence of structures relative to the forest. For example, minimum side setbacks at the time were 7’ but placement and spacing produced distances between houses that far exceeded the minimum 14’. Additions and new houses have, in almost all cases, preserved generous space between houses and minimized visual crowding with plantings.
c. High quality building materials and high level of craftsmanship.

B. BALANCING PRESERVATION AND FLEXIBILITY

Greenwich Forest represents a period in the evolution of Montgomery County worthy of preservation, but it has also changed in response to the needs of residents since it was created in the 1930s. These Guidelines seek a reasonable compromise between preservation and the needs of residents in several ways.

B1. Most of the houses in the Greenwich Forest Historic District are designated “contributing” because
they contribute to the architectural and historic nature of the district. Contributing structures are shown in
the map of the districts. These Guidelines are more specific for contributing structures.

B2. Other houses in the district are designated non-contributing either because (1) they were built more
recently than contributing houses with other architectural styles (see Appendix 3) or (2) their original
features have been significantly altered by subsequent modifications. Non-contributing structures are
shown on the map of the District. The Guidelines provide greater flexibility for owners of non-
contributing houses.

B3. These Guidelines reflect the reality that nearly all houses in Greenwich Forest have been modified
since their construction. Owners are not expected to return their houses to their original configurations.
The modifications they are permitted to make under these Guidelines are based on the current reality in
the neighborhood, provided that those modifications are consistent with the Principles in these
Guidelines.

B4. Property owners have additional flexibility under these Guidelines to make more extensive changes to
the parts of their houses that are less visible from the public rights-of-way in front of their houses. The
Guidelines accomplish this by stipulating different levels of review for specific elements on different
parts of houses.

The Guidelines that pertain to this project are as follows:

D4. Additions: Additions to contributing and non-contributing houses are allowed. The style of an
addition must be compatible and in keeping with the prevailing styles of that house. The style of the
addition must be compatible with the style of the original house, unless the owner wishes to change the
architectural style of both the house and addition to another style of a contributing house in Greenwich
Forest. Additions to contributing houses must preserve as a recognizable entity the outline of the original
house (not including subsequent additions). Side additions to contributing houses are allowed, but the
limits of the original façade must be demarcated by stepping back the front plane of the addition and by a
change in the addition’s roofline. Rear additions to contributing houses are allowed within limitations on
height and setbacks (see D5).

D5. Guidelines on dimensions: The total lot coverage of a house may not exceed 25% of the lot area, and
accessory buildings may not exceed 5% of the lot area. The area of an accessory building may be
increased by 2%, to 7% of total lot coverage, if the lot coverage of the house and the accessory buildings
added together does not exceed 30% of lot area.

Additions should try to preserve ample spacing between houses (see Principle 2b). For example, visual
crowding between houses could be minimized by placing an addition toward the back of a property,
placing an addition on the side of a property with greater distance to the adjacent house (especially when
a side lot abuts the rear setback of an adjacent corner house), or by screening additions with plantings.
The total of the two side lot setbacks must be at least 18’, with no less than 7’ on one side. Rear lot
setbacks must be at least 25’, though decks no higher than 3’ from the ground may extend to an 11’
setback.

The elevation of the main or predominant ridgeline(s) of a contributing house as viewed from the front
may not be increased. To avoid excessive increases in the visual mass of houses, the elevation of any
separate ridgelines of an addition to the rear of the house may not be more than 3’ above that of the main
ridgeline.

D7. Building materials: Replacement of roofs, siding, and trim with original materials is strongly
recommended and is considered maintenance that will not require an application for a work permit. Use
of non-original “like materials” such as architectural asphalt shingles requires a work permit to ensure that
they match the scale, texture, and detail of the original materials and are consistent with the overall design of the existing house. For example, homeowners wishing to replace slate or tile roofs may use alternative materials that match the scale, texture, and detail of the roof being replaced. If an original slate or tile roof had been replaced with non-original material before July 1, 2011, the homeowner may replace the existing roof in kind or with another material consistent with the architectural style of that house.

D16. Walkways and patios: Reconfiguration and replacement of existing pathways and patios that would not result in a net addition of impermeable hardscape surfaces are considered landscaping and do not require an application for a work permit. The installation of new walkways and patios requires a work permit and should minimize the creation of new impermeable hardscape surfaces (see Principle 1).

D17. Windows, dormers, & doors: Door and window replacements are acceptable, as long as the replacements are compatible with the architectural style of the house. Replacement windows with true or simulated divided lights are acceptable, but removable ('snap-in') muntins are not permitted on front-facing windows of contributing houses. Front-facing dormer additions to third floors are permitted on non-contributing houses and on contributing houses, if such additions do not involve raising the main roof ridge line (as specified in DS) and if the addition is compatible in scale, proportion, and architectural style of the original house.

**Fig. 2: Levels of Review Applicable to Contributing Properties from the Greenwich Forest Historic District Guidelines.**

According to the Guidelines, the three levels of review are as follows:
Limited scrutiny is the least rigorous level of review. With this level, the scope or criteria used in the review of applications for work permits is more limited and emphasizes the overall structure rather than materials and architectural details. The decision-making body should base its review on maintaining compatibility with the design, texture, scale, spacing and placement of surrounding houses and the impact of the proposed change on the streetscape.

Moderate scrutiny is a higher level of review than limited scrutiny and adds consideration of the preservation of the property to the requirements of limited scrutiny. Alterations should be designed so the altered structure does not detract from the fabric of Greenwich Forest while affording homeowners reasonable flexibility. Use of compatible new materials or materials that replicate the original, rather than original building materials, should be permitted. Planned changes should be compatible with the structure’s existing architectural designs.

Strict scrutiny is the highest level of review. It adds consideration of the integrity and preservation of significant architectural or landscape features and details to the requirements of the limited and moderate scrutiny levels. Changes may be permitted if, after careful review, they do not significantly compromise the original features of the structure or landscape.

Montgomery County Code; Chapter 24A-8

(a) The commission shall instruct the director to deny a permit if it finds, based on the evidence and information presented to or before the commission that the alteration for which the permit is sought would be inappropriate, inconsistent with or detrimental to the preservation, enhancement or ultimate protection of the historic site or historic resource within an historic district, and to the purposes of this chapter.

(b) The commission shall instruct the director to issue a permit, or issue a permit subject to such conditions as are found to be necessary to ensure conformity with the purposes and requirements of this chapter, if it finds that:

(1) The proposal will not substantially alter the exterior features of an historic site or historic resource within an historic district; or

(2) The proposal is compatible in character and nature with the historical, archeological, architectural or cultural features of the historic site or the historic district in which an historic resource is located and would not be detrimental thereto or to the achievement of the purposes of this chapter; or

(3) The proposal would enhance or aid in the protection, preservation and public or private utilization of the historic site or historic resource located within an historic district in a manner compatible with the historical, archeological, architectural or cultural value of the historic site or historic district in which an historic resource is located; or

(4) The proposal is necessary in order that unsafe conditions or health hazards be remedied; or

(5) The proposal is necessary in order that the owner of the subject property not be deprived of reasonable use of the property or suffer undue hardship; or

(6) In balancing the interests of the public in preserving the historic site or historic resource located within an historic district, with the interests of the public from the use and benefit
of the alternative proposal, the general public welfare is better served by granting the permit.

(c) It is not the intent of this chapter to limit new construction, alteration or repairs to any 1 period or architectural style.

(d) In the case of an application for work on an historic resource located within an historic district, the commission shall be lenient in its judgment of plans for structures of little historical or design significance or for plans involving new construction, unless such plans would seriously impair the historic or architectural value of surrounding historic resources or would impair the character of the historic district. (Ord. No. 9-4, § 1; Ord. No. 11-59.)

Secretary of the Interior’s Standards for Rehabilitation

The Secretary of the Interior defines rehabilitation as “the act or process of making possible a compatible use for a property through repair, alterations, and additions while preserving those portions or features, which convey its historical, cultural, or architectural values.” Because the property is a Master Plan Site, the Commission’s focus in reviewing the proposal should be the Secretary of the Interior’s Standards for Rehabilitation. The Standards are as follows:

1. A property shall be used for its historic purpose or be placed in a new use that requires minimal change to the defining characteristics of the building and its site and environment.

2. The historic character of a property shall be retained and preserved. The removal of historic materials or alteration of features and spaces that characterize a property shall be avoided.

3. Each property shall be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or architectural elements from other buildings, shall not be undertaken.

4. Most properties change over time; those changes that have acquired historic significance in their own right shall be retained and preserved.

5. Distinctive features, finishes, and construction techniques or examples of craftsmanship that characterize a historic property shall be preserved.

6. Deteriorated historic features shall be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature shall match the old in design, color, texture, and other visual qualities and, where possible, materials. Replacement of missing features shall be substantiated by documentary, physical, or pictorial evidence.

7. Chemical or physical treatments, such as sandblasting, that cause damage to historic materials shall not be used. The surface cleaning of structures, if appropriate, shall be undertaken using the gentlest means possible.

8. Significant archaeological resources affected by a project shall be protected and preserved. If such resources must be disturbed, mitigation measures shall be undertaken.

9. New additions, exterior alterations, or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be
compatible with the massing, size, scale, and architectural features to protect the historic integrity of the property and its environment.

10. New additions and adjacent or related new construction shall be undertaken in such a manner that if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.

STAFF DISCUSSION:

The subject property is c. 1941 Colonial Revival-style Contributing Resource within the Greenwich Forest Historic District. The house has experienced previous alterations, including conversion of the original attached garage at the north side of the house to a family room, replacement of the original windows with vinyl windows, and replacement of the original lap siding and wood trim with vinyl shake siding and vinyl trim.

The applicants propose the following work items at the subject property:

- Removal of the existing north (right) side attached garage/family room.
- Construction of a new addition at the north (right) side of the house. The applicants have provided two options for the proposed new addition:
  - Option A
    - A one-story addition with forward-sloping shed roof (similar to the existing).
    - As with the existing attached garage/family room, the front footprint will project beyond the front wall plane of the main house.
    - Option A includes a centered second floor addition with side gable.
    - The front wall of the second floor addition will be coplanar with that of the main house. The front roof slope will also be coplanar and connect directly with that of the main house.
    - Materials to match the existing.
  - Option B
    - A one-story addition with front-facing gable.
    - As with the existing attached garage/family room, the front footprint will project beyond the front wall plane of the main house.
    - This option will include a small second floor addition with side gable.
    - Unlike Option A, the front wall of the second floor addition will be behind that of the main house, and the entire roof will be lower than that of the main house.
    - Materials to match the existing.
- Construction of a covered arbor walkway at the rear of the property (only a narrative and site plan have been provided).
- Construction of new one-story garage at the rear of the property (only a narrative and site plan have been provided).

Staff asks for the Commission’s guidance regarding the following:

Removal of Existing Attached Garage/Family Room

As noted above, the family room at the north (right) side of the house was originally an attached garage. Although the garage has been significantly altered, staff expresses some concern with the removal of part of the historic house. Though the Guidelines do not
specifically address partial demolition of original structures, they tend to be liberal regarding the alteration of original structures, even allowing changes to the architectural style at the front elevation, so long as the new style is consistent with the style of another Contributing house in the district and is suitable to and does not significantly alter the original outline, shape and scale of the original structure.

**Forward Projecting Side Addition**

The Commission typically requires additions to be to the rear of the historic house, reducing their visibility from the public right-of-way and ensuring that the original form and massing of the historic house is discernible from the public right-of-way. Locating additions to the rear also ensures that they do not overwhelm or detract from the historic house or surrounding streetscape. Where side additions are allowed, the Commission requires them to be located behind the front wall plane of the historic house, with a ridgeline significantly lower than that of the historic house, preserving the original outline of the historic house.

This is consistent with the *Guidelines* for additions, which state “[a]dditions to contributing houses must preserve as a recognizable entity the outline of the original house (not including subsequent additions). Side additions to contributing houses are allowed, but the limits of the original facade must be demarcated by stepping back the front plane of the addition and by a change in the addition’s roofline.”

Staff expresses concerns with Option A, as the front wall and roof planes of this option are coplanar, connecting directly to those of the historic house. Likewise, staff expresses concerns with Option B, as the proposed front-facing gable addition represents a clear departure from the existing attached garage/family room, and, consequently, the outline of the original house.

It is unclear whether the front footprints of Options A and/or B are consistent with that of the existing attached garage/family room, but this information may be helpful in determining the appropriateness of the proposed side addition.

In accordance with the *Guidelines*, the Commission should review the proposed addition with strict scrutiny (see Fig. 2 above). Strict scrutiny, as defined by the Guidelines, “is the highest level of review. It adds consideration of the integrity and preservation of significant architectural or landscape features and details to the requirements of the limited and moderate scrutiny levels. Changes may be permitted if, after careful review, they do not significantly compromise the original features of the structure or landscape.”

**Proposed Materials**

As noted, the subject property has experienced previous alterations, including installation of vinyl shake siding, vinyl trim, and vinyl windows. The applicants propose matching materials for the proposed addition(s). The Commission typically does not approve vinyl materials for Contributing Resources within historic districts, as they do not share the visual qualities of traditional materials. In this case, the proposed materials will match existing materials, which the Commission may take into consideration.

Regarding materials, the *Guidelines* generally encourage in-kind replacement of original materials; however, in this case, the original materials have been previously replaced. Per Fig. 2 above, the Commission should exercise moderate scrutiny in reviewing the
proposed materials. Moderate scrutiny is defined as “a higher level of review than limited scrutiny and adds consideration of the preservation of the property to the requirements of limited scrutiny. Alterations should be designed so the altered structure does not detract from the fabric of Greenwich Forest while affording homeowners reasonable flexibility. Use of compatible new materials or materials that replicate the original, rather than original building materials, should be permitted. Planned changes should be compatible with the structure’s existing architectural designs.”

**Proposed Covered Arbor Walkway**

Insufficient has been provided to conduct a full analysis for the proposed covered arbor walkway. From the submitted narrative and site plan, staff has determined that the proposed walkway will be 4’ wide and will be located at the rear of the subject property along the southern (left) edge of the existing asphalt driveway. The walkway will connect the house to the proposed one-story garage. Staff asks the Commission to provide feedback and guidance, based upon the available information and the *Guidelines*.

Regarding walkways, the *Guidelines* state that new walkways should minimize the creation of new impermeable hardscape surfaces, consistent with Principle 1 (see above).

**Proposed Garage**

Insufficient has been provided to conduct a full analysis for the proposed garage. From the submitted narrative and site plan, staff has determined that the proposed garage will be approximately 20’ x 14’ wide and will be located at the rear of the subject property at the end of the existing asphalt driveway. Staff asks the Commission to provide feedback and guidance, based upon the available information.

**Lot Coverage**

The *Guidelines* for Greenwich Forest specify that “the total lot coverage of a house may not exceed 25% of the lot area, and accessory buildings may not exceed 5% of the lot area. The area of an accessory building may be increased by 2%, to 7% of total lot coverage, if the lot coverage of the house and the accessory buildings added together does not exceed 30% of lot area.” To date, existing and proposed lot coverage numbers have not been provided by the applicants. Staff finds that this information should be submitted by the applicants prior to submitting a HAWP application.

**STAFF RECOMMENDATION:**

Staff recommends that the applicants make any revisions based upon the HPC’s comments and return for a second preliminary consultation or with a HAWP application, depending on the HPC’s recommendation.

SEE REVERSE SIDE FOR INSTRUCTIONS
THE FOLLOWING ITEMS MUST BE COMPLETED AND THE REQUIRED DOCUMENTS MUST ACCOMPANY THIS APPLICATION.

1. WRITTEN DESCRIPTION OF PROJECT
   a. Description of existing structure(s) and environmental setting, including their historical features and significance:
      
      807 Westover Road is a 1941 2 story stone and frame Colonial Revival home (Frederick G. Frost Architects, NY, NY with local architect Robinson McPherson of Bethesda). The original house has a one story garage (now family room) on the north side and a 2 story glass enclosed porch on the rear.
      
      The house now has replacement vinyl windows with mantels that match the original pane configuration. Original lap siding was replaced with aluminum and new extra-thick single color shake siding and trim that replicates the original trim.
   b. General description of project and its effect on the historic resource(s), the environmental setting, and, where applicable, the historic district:
      
      Submission for preliminary concept review of partial 2nd story addition. 1 story extension of historic north side garage. Also proposing new shed to replace garage of covered brick walkway in rear yard. These additions will not overwhelm the original street facade. Existing materials and windows will be matched (though some cut trim may be replicated in solid PVC material).

2. SITE PLAN
   
   Site and environmental setting, drawn to scale. You may use your plot. Your site plan must include:
   a. the scale, north arrow, and date;
   b. dimensions of all existing and proposed structures; and
   c. site features such as walkways, driveways, fences, ponds, streams, trash dumpsters, mechanical equipment, and landscaping.

3. PLANS AND ELEVATIONS
   
   You must submit 2 copies of plans and elevations, in a format no larger than 11" x 17". Plans on 8 1/2" x 11" paper are preferred.
   a. Schematic construction plans, with marked dimensions, indicating location, size and general type of walls, window and door openings, and other fixed features of both the existing resources and the proposed work.
   b. Elevations (facades), with marked dimensions, clearly indicating proposed work in relation to existing construction and, when appropriate, context. All materials and fixtures proposed for the exterior must be noted on the elevations drawings. An existing and a proposed elevation drawing of each facade affected by the proposed work is required.

4. MATERIALS SPECIFICATIONS
   
   General description of materials and manufactured items proposed for incorporation in the work of the project. This information may be included on your design drawings.

5. PHOTOGRAPHS
   
   a. Clearly labeled photographic prints of each facade of existing resource, including details of the affected portions. All labels should be placed on the front of photographs.
   b. Clearly label photographic prints of the resource as viewed from the public right-of-way and of the adjoining properties. All labels should be placed on the front of photographs.
